#### Abstract

This class provides a template for type setting Event-B models. It was developed at the Swiss Federal Institute of Technology Zurich (ETH-Zurich).

#### Contents

1	Introduction
2	Usage 2.1 Package Options
3	Implementation
	3.1 Package Loading
	3.2 Declaration of Options for the Package
	3.3 Commands for Pretty-Print Event-B Models

#### 1 Introduction

This package was developed in order to ease the type setting of Event-B models in  $\LaTeX$  .

### 2 Usage

See sample-eventB.tex for an example of how to use the package.

#### 2.1 Package Options

The package offers the following options:

- nobox: to disable to bounding boxes for the Event-B modelling elements,
- small, compact, tiny: options for font size,
- colour (or color): to colour several modelling elements.

<sup>\*</sup>This document corresponds to eventB v1.1.1, dated 2012/02/21.

#### 3 Implementation

#### 3.1 Package Loading

We begin by loading the required package xspace and xcolor.

```
1 \RequirePackage{xspace}
2 \RequirePackage{xcolor}
3 \RequirePackage{ifthen}
```

#### 3.2 Declaration of Options for the Package

In this part various options for the package are defined.

**Option for rounding boxes** By default, Event-B modelling elements, e.g., invariants, events, etc., are displayed in a rounding box. This option enables them to be displayed without the rounding box.

**Options for colouring** Keywords, labels and identifiers in Event-B can be coloured. We define several commands and redefine them accordingly for colouring. When colour (or color) option is enabled, one can customise the colours for Event-B keywords, labels or identifier or proof obligation labels.

```

After declaration of options, we execute them accordingly.

108 \ProcessOptions

#### 3.3 Commands for Pretty-Print Event-B Models

We start with the definition of the \eventB macro.

```
109 \newcommand{\eventB}{Event-B\xspace}
```

The Bcode environment for displaying Event-B models. The environment has an optional argument for specifying the font size. By default, it is the same as the \B@fontsize controlled by the package option.

```
110 \newenvironment{Bcode}[1][\B@fontsize]{\begin{center}#1}{\end{center}}
```

**Declarations and Collections** Event-B modelling elements are organised into declarations (e.g., variables, constants, etc.) or collections (e.g., invariants, axioms). For each declaration, the input is a comma-separated list of elements. For each collection, the input is a newly( $\backslash \backslash$ )-separated list of elements.

```
111 \newcommand{\carriersets}[1]{
112 \B@declaration{sets}{#1}
113 }
114 \newcommand{\constants}[1]{
115 \B@declaration{constants}{#1}
116 }
117 \newcommand{\axioms}[2][]{
118 \B@section[#1]{axioms}{#2}

#### **Event-B keywords** We define the keywords for pretty-print Event-B models.
